

VOGEL - Multistage Pumps

Design P, PVa, MP 300

Sizes DN 80 - DN 300

VOGEL MULTISTAGE PUMPS

Performance range:

Capacities up to 2000 m³/h (8800 USgpm)

Head up to 300 m (1000 feet)

Max. speed up to 1750 min⁻¹ (1750 r.p.m)

Multistage pumps of series MP with smaller capacities and max. speed up to 3.600 min⁻¹, refer to brochure 2200.1.B.

Sizes:

DN 80 up to DN 300 (from 3" to 12")
discharge

Max. temperature:

140°C (280°F)

Max. casing pressure:

45 bar (650 psig)

For more detailed information about operation limits with regard to material of construction and operating conditions please refer to data sheets or actual quotations.

Handled liquids:

Pure as well as slightly contaminated media such as:

hot and cold water

condensate

oil suspensions

acids as well as their watery solutions

caustic solutions

brine

Application:

water supply

booster systems

irrigation

fire fighting

cooling circuits

boiler feed

condensate

district heating

osmosis and ultra filtration

spray water systems

cleaning systems

mining

Pumpenfabrik ERNST VOGEL has developed and manufactured multistage pumps since 1910.

Our application and manufacturing expertise provide you with the **BEST SOLUTION** to meet your pumping needs.

VOGEL MULTISTAGE PUMPS

VOGEL Multistage pumps utilize a modular design concept which maximizes component interchangeability. As such, multiple design configurations can be engineered to meet customer requirements without compromise to repair part inventories.

Modular system:

The entire performance range is covered by 7 mechanical sizes that hold 9 different hydraulics.

Size	Discharge branch DNd [mm]	Suction branch DNs [mm]	Capacity Q [m³/h]	Capacity Q [m³/h]
			50 Hz	60 Hz
84 P, PVa	80	100	120	140
104 P, PVa	100	125	170	200
124 P, PVa	125	150	250	300
154 P, PVa	150	200	420	500
204 P, PVa	200	250	660	790
253 P	250	300	800	900 ¹⁾
254 P	250	300	980	1100 ¹⁾
MP 300.1	300	400	1200	-
MP 300.2	300	400	1400	-

1) upon request

Hydraulics:

Sizes 84-254, closed radial type impellers designed for casing wear ring on both sides. Axial thrust minimized by balance holes for minimum bearing loads and a maximum bearing lifetime. Size MP 300.1 and MP 300.2 thrust balanced by a balancing drum.

Size 84-154 P: on piece design for diffuser and casing. Size 204-254 P and MP 300.1, 300.2: two piece design for diffuser and casing. Balanced radial forces, minimum shaft deflection, minimum vibrations.

**Heavy duty design for long term
operation in industrial applications.**

All design versions acc. to ISO 5199 / EN 25199.

**ISO 9001 certification guarantees high quality
standards and reliability of our products.**

VOGEL MULTISTAGE PUMPS

Performance range - 50 Hz

1450 r.p.m.

Performance range - 60 Hz

1750 r.p.m.

VOGEL MULTISTAGE PUMPS

Design versions:

Type P, MP 300:

Horizontal shaft with bearings at both ends, drive-end at discharge side (standard), rotation clockwise, with suction branch left and discharge branch radially upwards, oil lubrication. Counter clockwise rotation and other flange orientations are available as an option.

Type PVa:

Vertical design with separate thrust bearing and flexible coupling between motor and pump. Standard IEC motors, up to 315 kW.

Type PT

Vertical wet pit configuration length: max. 10 m - 1450 / 1750 r.p.m.
Inducer design available.

Sectional drawing page 8

VOGEL MULTISTAGE PUMPS

TYPE P:

- Horizontal configuration with outer bearings on both sides.
- Driven by electric motors, combustion engines or steam turbines, via flexible coupling.
- Drive side discharge, clockwise rotation (drive side suction and counter clockwise rotation available).
- Branch directions: suction left viewed from drive end, discharge radially upwards. Branches can be adjusted to meet customer requirements in 90° increments.
- Drive side thrust bearing, two angular contact ball bearings. Suction side roller bearing as floating bearing. Oil lubrication with large capacity oil sump.
- Thermal expansion of the pump rotor will be balanced internally without affecting the shaft alignment.
- Shaft sealing arrangements (mechanical seal or gland packing) see pages 9 and 10.
- Maintenance friendly design. Bearings and shaft seal are maintainable without pump disassembly.

VOGEL MULTISTAGE PUMPS

Pumps sets:

Accessories availables

- baseframes
- couplings
- coupling guards
- motors
- minimum flow valves
- speed control
- special accessories to meet customer requirements

Sizes 84 up to 204 P are available in a space saving vertical design.

Type PVa:

- Vertical configuration with a separate thrust bearing. Grease lubricated with grease nipples.
- Standard motor according to IEC, design V1, up to 315 kW
- Flexible coupling between pump and motor
- Medium lubricated sleeve bearing in suction casing
- Maintenance friendly design. Bearings and shaft seal are maintainable without pump disassembly.

VOGEL MULTISTAGE PUMPS

Type PT:

- Vertical wet pit design
- Installation length:
1450/1750 r.p.m. - max. 10 m
- Separate grease lubricated thrust bearing with grease nipples
- Standard motors according to IEC, design V1
- Flexible coupling between pump and motor
- Drive and discharge branch always above liquid level
- Medium lubricated sleeve bearings in pump body and shaft section. Number of bearings depending on installation length
- Suitable for variable speed control
- Mechanical seal or gland packing available
- Maintenance friendly design
- Suction bells, suction strainers or foot valves available
- Can design available when pumping hot or volatile media
- Inducer design available for low NPSH applications when pumping volatile and warm liquids

VOGEL MULTISTAGE PUMPS

Shaft seal options:

Mechanical seals:

Seal chamber dimensions with comply ISO 3096. Mechanical seals of all brands that comply with this standard and EN 12756, version „k“ can be used without modification of the standard parts.

An internal flush system guarantees optimum lubrication and cooling of the seal faces.

Single mech. seal, Design U
unbalanced up to max. 16 bar

Single mech. seal, Design B
balanced up to max. 45 bar

For more detailed information about operation limits with regard to material configuration and operation conditions please refer to data sheets or actual quotations.

Gland packing:

The availability of gland packings is limited to max. operation pressure of 25 bar.

Above 25 bar operation pressure only mech. are available.

VOGEL MULTISTAGE PUMPS

Shaft seal options:

Cartridge mechanical seal

Cartridge seals are pre-assembled units that guarantee trouble free mounting as well as reliability. Cartridge seals also minimize the maintenance cost arising while changing the seal.

Single mechanical seal cartridge,
also available with Quench.

Double mechanical seal cartridge with
connection for external flush.

Pumps with more than one discharge - Multioutlet design:

Multistage pumps in Multioutlet design can be fitted with a random number of discharge branches. The pumps are mostly used in fire fighting application to serve different pressure zones with different pressure levels.

Multioutlet configurations are not only available in horizontal execution for design PM, but also in vertical execution for design PVaM.
